To evaluate the safety and efficacy of optic-nerve head decompression (ONHD) during pars plana vitrectomy (PPV). Retrospective case series. Forty-one consecutive patients (41 eyes) with either an acute or chronic retinal detachment and a history of previous vitrectomy or combined vitrectomy with scleral buckling surgery (n = 24), or scleral buckle placement (n = 17). Data were collected from the clinical charts of patients undergoing PPV with ONHD. All patients underwent 23-gauge PPV using ONHD. Transient or permanent ONHD was accomplished in all eyes by anterior capsulotomy with trans-hyaloid traction and by anterior subhyaloid optic nerve cutting. Overall anatomic success was achieved in 37/41 (90.2%) eyes. Eleven (27.5%) eyes were reoperated because of failed initial

surgery or because of recurrent retinal detachment. Three (7.3%) eyes underwent an eviscer 82157476af
